QUALI STRATEGIE ADOTTARE IN FUTURO?

Outlook e diversi scenari di rischio per i prossimi 1-3 anni:

Scenario di Base: Crescita moderata, Inflazione contenuta	Scenario Alternativo 1: Stime sull'inflazione in rialzo	Scenario Alternativo 2: Rallentamento della ripresa globale
Ripresa globale positiva ma su livelli storicamente contenuti	Netto miglioramento della ripresa globale e negli USA	Ripresa globale in stallo e conseguente rallentamento della crescita economica negli USA
Bassa inflazione – aumento molto lento e graduale nel tempo	Inflazione inizialmente in lieve rialzo (mentre salgono rapidamente le attese)	Forze deflazionistiche a livello globale spingono l'inflazione effettiva e attesa al ribasso
Tassi di interesse in rialzo in linea con le previsioni, ma su livelli storicamente contenuti	Tassi di interesse sensibilmente in rialzo	Tassi di interesse in calo (come conseguenza di una minore propensione al rischio degli investitori)

Description: Western Asset's Macro Opportunities Composite is an unconstrained, global macro strategy that focuses on long-term value investing and active management of duration, yield curve and volatility. It does this primarily by identifying relative value among securities and sectors in global fixed-income markets.

Objective: Maximize total return.

Benchmark Description: The Composite is not measured against a benchmark as accounts that may comprise the Composite are measured on an absolute return basis. There is no benchmark available that appropriately reflects the guidelines of all accounts within the Composite.

Base Currency: USD | **Composite Minimum:** US\$1 million

Current Fee Schedule: 1% on all assets.

Examination Period: The Composite has been examined for the period from April 1, 2012 to December 31, 2014.

¹Partial period return (April 1, 2012 to December 31, 2012).

COMPOSITE DISCLOSURE

31 DECEMBER 2014

Western Asset claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Western Asset has been independently verified for the periods from January 1, 1993 to December 31, 2014. The verification report is available upon request.

Verification assesses whether (1) the Firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. The verification does not ensure the accuracy of any specific composite presentation.

For GIPS® purposes, the Firm is defined as Western Asset, a primarily fixed-income investment manager comprised of Western Asset Management Company, Western Asset Management Company Limited, Western Asset Management Company Pte. Ltd., Western Asset Management Company Ltd, Western Asset Management Company Pty Ltd, and Western Asset Management Company Distribuidora de Títulos e Valores Mobiliários (DTVM) Limitada, with offices in Pasadena, New York, London, Singapore, Tokyo, Melbourne, São Paulo, Hong Kong, and Dubai. Each Western Asset company is a wholly owned subsidiary of Legg Mason, Inc. ("Legg Mason") but operates autonomously, and Western Asset, as a Firm, is held out to the public as a separate entity. Western Asset Management Company was founded in 1971.

The Firm is comprised of several entities as a result of various historical acquisitions made by Western Asset and their respective performance has been integrated into the Firm in line with the portability requirements set forth by GIPS.

The Composite is valued monthly. The Composite returns are the asset-weighted average of the performance results of all the accounts in the Composite. Gross-of-fees returns are presented before management fees, but after all trading expenses. Net of fees results are calculated using a model approach whereby the current highest tier of the appropriate strategy's fee schedule is used. This model fee does not reflect the deduction of performance based fees. The portfolios in the Composite are all actual, fee-paying and performance fee-paying, fully discretionary accounts managed by the Firm for at least one full month. Investment results shown are for taxable and tax-exempt accounts and include the reinvestment of all earnings. Any possible tax liabilities incurred by the taxable accounts have not been reflected in the net performance. Composite performance results are time-weighted net of trading commissions and other transaction costs including non-recoverable withholding taxes. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.

The returns for the accounts in the Composite are calculated using a time-weighted rate of return adjusted for weighted cash flows. The returns for commingled funds in the Composite are calculated daily using net value (NAV), adding back the funds' total expense ratio or equivalent. Trade date accounting is used since inception and market values include interest income accrued on securities held within the accounts. Performance is calculated using asset values denominated in a base currency. Composite market value at year-end presented in the schedule are translated to U.S. dollars using end of year exchange rates.

Composite returns are measured against a benchmark. The benchmark is unmanaged and provided to represent the investment environment in existence during the time periods shown. For comparison purposes, its performance has been linked in the same manner as the Composite. The benchmark presented was obtained from third party sources deemed reliable but not guaranteed for accuracy or completeness. Benchmark returns and benchmark three-year annualized ex-post standard deviation are not covered by the report of independent accountants.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns of those portfolios that were included in the Composite for the entire year. For each annual period, accounts with less than 12 months of returns are not represented in the dispersion calculation. Periods with five or fewer accounts are not statistically representative and are not presented. The three-year annualized ex-post standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. Any gross total three-year annualized ex-post standard deviation measures prior to 2011, included within the "Examination Period" identified above, are not covered by the report of independent accountants.

Past investment results are not indicative of future investment results.

Western Asset's list of composite descriptions is available upon request. Please contact Jan Pieterse at 626-844-9977 or jan.pieterse@westernasset.com. All returns for strategies with inception prior to January 1, 2005 are available upon request.

IMPORTANT INFORMATION

These are sub-funds ("fund") of Legg Mason Global Funds plc ("LMGF plc"), an umbrella fund with segregated liability between sub-funds, established as an open-ended investment company with variable capital, organised as an undertaking for collective investment in transferable securities ("UCITS") under the laws of Ireland as a public limited company pursuant to the Irish Companies Acts and UCITS regulations. LMGF plc is authorised in Ireland by the Central Bank of Ireland (the "Central Bank").

It should be noted that the value of investments and the income from them may go down as well as up. Investing in a sub-fund involves investment risks, including the possible loss of the amount invested. Past performance is not a reliable indicator of future results. An investment in a sub-fund should not constitute a substantial proportion of an investor's investment portfolio and may not be appropriate for all investors. Investors' attention is drawn to the specific risk factors set out in a fund's share class key investor information document ("KIID") and LMGF plc's prospectus (the "Prospectus").

This material is not necessarily a complete summary and is not intended, for example, as a complete analysis. The information and data in this material (that may include without limitation research, forecasts, figures, opinions, statements, trends, investment techniques and strategies) has been prepared from sources believed reliable but is not guaranteed in any way by Legg Mason Investments (Europe) Limited nor any Legg Mason, Inc. company or affiliate (together "Legg Mason"). No representation is made that the information or data is correct as of any time subsequent to its date. Further there is no guarantee or assurance that funds will achieve their investment objectives. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Risks: Legg Mason Western Asset Macro Opportunities Bond Fund

Bonds: There is a risk that issuers of bonds held by the fund may not be able to repay the bond or pay the interest due on it, leading to losses for the fund.

Liquidity: In certain circumstances it may be difficult to sell the fund's investments because there may not be enough demand for them in the markets, in which case the fund may not be able to minimise a loss on such investments.

Low rated bonds: The fund may invest in lower rated or unrated bonds of similar quality, which carry a higher degree of risk than higher rated bonds.

Emerging markets investment: The fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Fund currency: Changes in exchange rates between the currencies of investments held by the fund and the fund's base currency may negatively affect the value of an investment and any income received from it.

Hedging: The fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the fund and base currency of the fund itself (hedging). However, hedging transactions can also expose the fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the fund.

Interest rates: Changes in interest rates may negatively affect the value of the fund.

Derivatives: The Fund makes significant use of derivatives. Investment in derivatives may cause the fund to lose as much as or more than the amount invested. Use of derivatives may also result in greater fluctuations of the value of the fund.

Fund counterparties: The fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

Fund operations: The fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Individual securities mentioned are intended as examples only and are not to be taken as advice nor are they intended as a recommendation to buy or sell any investment or interest. Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situations or needs of investors.

Before investing investors should read in their entirety LMGF plc's application form and a fund's share class KIID and the Prospectus (which describe the investment objective and risk factors in full).
