PRESTITI VITALIZI

House rich and cash poor: l'Italia in prima linea in Europa per la crescita del mercato

SOLUZIONI DI EQUITY RELEASE

HIGH YIELD / LOW RISK

- I portafogli di prestiti vitalizi ipotecari offrono un elevato potenziale di rendimento (circa **4% IRR net of risk**)
- Rischi limitati grazie alla strutturazione del prodotto e alla **decorrelazione dai principali driver di rischio** (esposizione real estate e rischio di longevità)

LONG DURATION

- La **duration dei portafogli è prevedibile** basandosi sulle tabelle di longevità, in area **[15]+ anni**
- La volatilità è limitata durante il ciclo di investimento grazie alla bassa volatilità dei fattori di rischio

CAPITAL EFFICIENCY

- È possibile strutturare il prodotto in modo che parte degli asset siano *Matching Adjustment* eligible
- **Basso SCR** grazie alla struttura conservativa del prodotto; **non qualificato come cartolarizzazione** nel caso di una nota untranchè (CRR, Sii)

LONGEVITY HEDGING

- I portafogli di prestiti vitalizi ipotecari sono utilizzati per **coprire il rischio di longevità** gravante sui provider di annuity: il roll-up degli interessi genera un incremento dei ricavi se la longevità aumenta

POSITIVE SOCIAL IMPACT (ESG)

- **Coprire il fabbisogno pensionistico degli anziani in un contesto di welfare statale più stringente**
- Consente di aumentare la liquidità degli asset immobiliari per quelle famiglie «house rich and cash poor»
- Forte supporto da istituzionali e associazioni di consumatori, in linea con le best practice internazionali

HIGH MARKET POTENTIAL

- Il mercato UK è consolidato con € 4mld/anno in termini di volumi
- **Italia, Spagna e Germania sono mercati con forte potenziale di crescita**
- Il mercato italiano è il più promettente con volumi che potrebbero crescere a € 2mld/anno e la presenza di attori con esperienza consolidata

INFORMAZIONI IMPORTANTI (LYXOR)

Performance of the All Weather Sustainability Strategy, which has been calculated by Bridgewater, is based on simulated, hypothetical performance and not the actual returns of any strategy. Bridgewater investment selection and trading strategies are systematic and rules-based. Simulated returns are based on assumptions about how Bridgewater would have implemented the All Weather Sustainability Strategy through time. These assumptions are intended to approximate such implementation, but are inherently speculative.

The simulated performance for the All Weather Sustainability Strategy simulation was derived by applying Bridgewater's current investment systems and portfolio construction of the All Weather Strategy managed by Bridgewater since June 1996 across the markets selected for the All Weather Sustainability Strategy simulation. Bridgewater adjusted the leverage/exposure in each market and asset class based on the All Weather Strategy portfolio construction logic to ensure that the All Weather Sustainability Strategy simulated portfolio is similarly environmentally balanced at each date historically.

The markets selected were chosen following Bridgewater current sustainable security selection criteria. Bridgewater did not have historical sustainability assessments given limited availability of historical sustainability data. In creating the All Weather Sustainability Strategy simulation, Bridgewater therefore assumed that the current universe of sustainable assets is representative of a portfolio of sustainable assets historically.

Bridgewater used actual market returns for each asset when available as an input for the hypothetical returns and otherwise used proxies. Proxies are assets that existed and for which data is available, which Bridgewater believes would approximate returns for an asset that did not exist or for which reliable data is not available. Examples of omitted markets or markets accounted for using proxies include, but are not limited to, certain Emerging Market equities, certain nominal government bonds (South Korea) and sustainable commodity producer equity returns. The mix and weightings of markets traded for All Weather Sustainability Strategy simulation are subject to change in the future.

Unlike an actual performance record, simulated performance does not represent actual trading or the costs of managing a portfolio. Also, since the trades have not actually been executed, the results may have under or over compensated for the impact, if any, of certain market or economic factors, such as lack of liquidity. All Weather Sustainability Strategy simulation past performance in general is also subject to the fact that it is designed with the

benefit of hindsight.

The All Weather Sustainability Strategy simulation includes periodic adjustments of desired strategic asset allocation and level of risk pursuant to Bridgewater's systematic strategic management process. Such strategic management is based on a systematic process that assesses whether the assumptions underlying the All Weather Strategy approach (that assets will outperform cash, and that assets can be reasonably balanced against each other) are under threat, and systematically adjusts or reduces exposures accordingly. When applicable, the returns of the All Weather Sustainability Strategy simulation reflect adjustments based on this systematic strategic management process.

Transaction and maintenance costs related to the trading are accounted for and are estimates themselves based on historical measured costs and/or modeled costs.

Returns are shown net of fees. Net of fees performance includes (i) management fees estimation of 75bps per annum (ii) service providers fees (such as administrator, custodian) of 40bps per annum and (iii) includes the reinvestment of interest, gains and losses.

These results are based on simulated or hypothetical performance results that have certain inherent limitations. Unlike the results shown in an actual performance record, these results do not represent actual trading. Also, because these trades have not actually been executed, these results may have under- or over-compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated or hypothetical trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profits or losses similar to these being shown.

THE FIGURES RELATING TO PAST PERFORMANCE REFER OR RELATE TO PAST PERIODS AND ARE NOT A RELIABLE INDICATOR OF FUTURE RESULTS. THIS ALSO APPLIES TO HISTORICAL MARKET DATA.

Markets included in the All Weather Sustainability Strategy simulation:

The All Weather Sustainability Strategy simulation includes returns from the following markets: global nominal interest rates, global inflation linked bonds, gold, and developed and emerging market equities that have been selected based on Bridgewater's process for assessing their sustainability.

INFORMAZIONI IMPORTANTI (LYXOR)

Third party data risk:

The Investment Manager's specific sustainability criteria alignment analysis may be dependent on third party data that may be incomplete, inaccurate or unavailable from time to time, which could adversely affect the analysis of the ESG factors relevant to a particular investment. These assessments include objective criteria and may change over time, which could cause the portfolio to hold investments for an extended period of time that do not comply with the strategy SDG-focused investment criteria. As a result, there is a risk that the Investment Manager may incorrectly assess a security or an issuer.

Exclusion of certain markets, trading strategies and financial instruments:

It is expected that the strategy will not participate in all of the markets, trading strategies and financial instruments utilized by, or invested in by, funds or accounts managed or advised by the Investment Manager. In particular, the strategy may not invest in certain financial instruments in which funds or accounts managed by the Investment Manager pursuant to its other investment strategies may invest. Investing primarily in responsible investments carries the risk that the strategy is expected to underperform funds that do not utilize a responsible investment strategy.

The Investment Manager does, and will in the future, manage funds and accounts pursuant to other investment strategies with similar or overlapping investment objectives and strategies to those of the strategy. Certain of those funds and accounts may have different limitations and may not impose the same sustainability restrictions as those applicable to the strategy, and, therefore, may have access to, and may be entitled to participate in, more or all of the trading strategies developed by the Investment Manager. In managing the strategy, the Investment Manager might not use, and expects not to use, all of the trading strategies developed by the Investment Manager, which may cause the strategies performance to vary significantly from the performance of such funds and accounts.

Sustainable Risk consideration:

The strategy is exposed to sustainability risks, which are environmental, social or governance events or conditions that, if they occur, could cause an actual or potential material negative impact on the value of the strategy investments.

By implementing its proprietary investment methodology, the Investment Manager, within each asset class, will exclude at any time at least 20% of the securities of the strategy initial investment universe that have the lowest level of alignment with the SDGs (expressed in number of issuers). By taking into account alignment with the SDGs within its investment process, it is intended that the overall sustainability risk of the strategy should be mitigated and, therefore, the potential impact of such sustainability risks on the value of the portfolio investments should also be mitigated. However, no assurance can be given that sustainability risks will be totally removed and the occurrence of such risks could cause a material negative impact on the strategy investments.

INFORMAZIONI IMPORTANTI (LYXOR – DISCLAIMER 2-4)

The fund includes embedded leverage, which amplifies the variation, upwards or downwards, in the value of the underlying investments. The fund invests in financial derivative instruments in order to reach its investment objective. These instruments could be affected by various risks such as change in law or tax events. The fund is exposed to the risk that any credit institution with which it has concluded an agreement or a transaction could become insolvent or otherwise default. If such an event occurs, you could lose a significant part of your investment. In certain circumstances, financial instruments held by the fund or to which the value of the fund is linked could suffer a temporary lack of liquidity. This could cause the Fund to lose value, and/or to temporarily suspend the publication of its net asset value and/or to refuse subscription and redemption requests. The fund is exposed to the risk that the credit quality of any direct or indirect debtor of the fund (be it a state, a financial institution or a corporate) deteriorates or that any such entity defaults. This could cause the net asset value of the fund to decline.

Securities in the Fund are offered and sold to certain investors through SG Americas Securities, LLC ("SGAS"), an affiliate of Lyxor Asset Management S.A.S. ("Lyxor S.A.S.") and a member of the U.S. Financial Industry Regulatory Authority, the U.S. Securities Investor Protection Corporation and the New York Stock Exchange. Lyxor S.A.S. may pay a placement fee to, and provide compensation for expenses to, SGAS in connection with its services provided in connection with the distribution of shares of such funds.
