

# □ M&G Investire in debito speculativo in un contesto macroeconomico sfidante

Riccardo Cumerlato, Investment Specialist

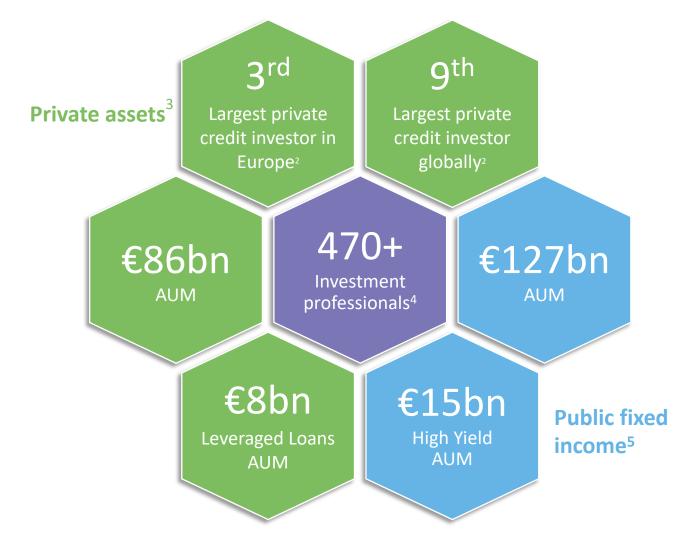

**June 2023** 

For Investment Professionals only. This document does not constitute an offer or an invitation to subscribe to units or shares of an AIF. The information presented must not be relied upon as it is in draft form and may be subject to change.

### Who we are

FTSE 100 global asset manager, with a large footprint in European Public and Private Fixed Income

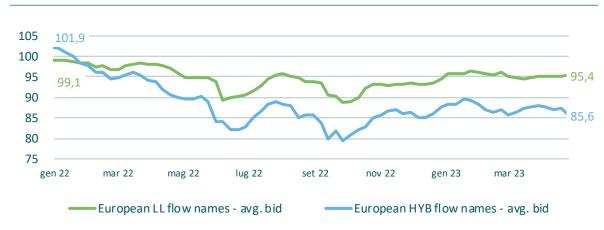

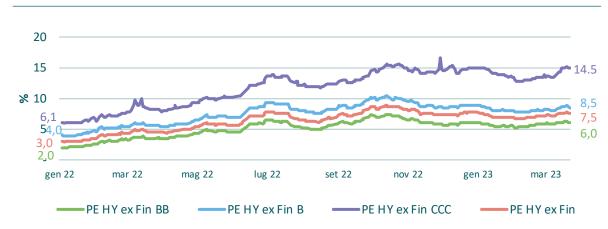

### Market opportunity: deteriorating and volatile credit markets

Market volatility has increased and spreads are widening. This creates stressed credit trading opportunities

#### European leveraged loan and high yield bond prices decreased in the last 15 months...<sup>1</sup>

#### ... with high yield bond yields increasing significantly in the same period<sup>2</sup>

#### Market volatility has consistently been above historical averages since the beginning of the year<sup>3</sup>

# Market opportunity: challenging refinancings lead to restructurings

Debt issuance has been disrupted at a time when corporate leverage is historically high, increasing the yield required by corporate debt and creating **distressed credit** in need of restructuring

#### Outstanding leveraged loan amounts have reached record levels<sup>1</sup>

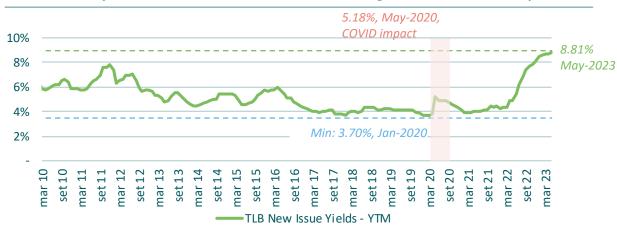

FY22 LL and HYB issuance in Europe is lower than historical averages<sup>2</sup>

#### Average leveraged loan issuances total debt/EBITDA ratio in Europe<sup>3</sup>

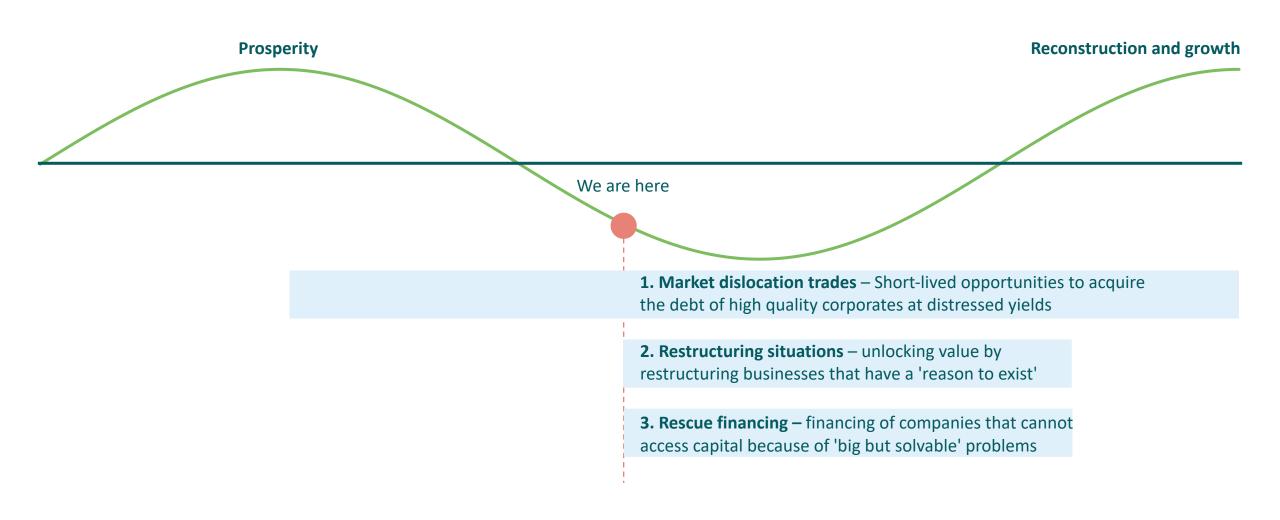

#### Yields on newly issued loans in EU rose in 2022 to the highest levels in over 10 years<sup>4</sup>

# Market opportunity: three key stressed/distressed opportunities

As recessionary pressures increase, three key opportunities are created in the stressed/distressed space

# Market opportunity: much broader than stressed and distressed

### Compelling relative value in current macro environment

### Indicative liquidity and returns of prospective asset classes

#### Asset class characteristics

#### Different markets offer balance of return, liquidity and asset availability

- High yield bonds have greatest liquidity but most volatile returns
- Senior loans market size offers confidence of deployment combined with liquidity
- Current average loan price in the 90s with c.25% p.a average prepayment rates offers rare chance to add capital gain to running income
- Private debt assets at the higher returning, more stable end of the spectrum have less liquidity and are usually only available to clients in pure form via closed ended funds
- Private asset classes offer defensive characteristics alongside higher returns
  - Floating rate, low-duration assets provide relative stability of returns
  - Downside protection afforded by security and seniority
  - In direct lending, lower liquidity is compensated by maintenance covenants
  - Our opportunistic debt strategy covers all debt asset classes and is focussed on buying undervalued companies well known to M&G.

# Investment opportunity: a full menu of credit asset classes

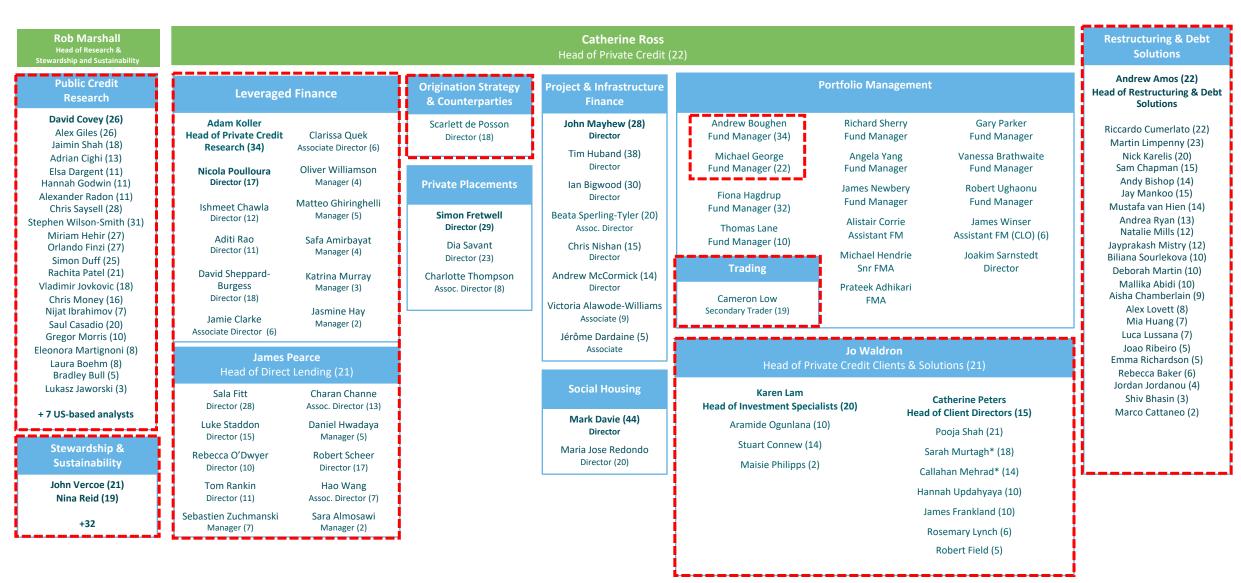

Fine-tuned to the clients' needs: return, risk, cash yield, liquidity, etc.

|                                 |  | Long-term Yield* | Current<br>Prospective<br>Yield* | Basis                 | Ratings | Liquidity                    |  |
|---------------------------------|--|------------------|----------------------------------|-----------------------|---------|------------------------------|--|
| Liquid Corporate Debt           |  |                  |                                  |                       |         |                              |  |
| Senior Loans                    | Loans to private, below-investment grade companies, but with security and seniority offering an premium of circa 100bps to the main loan market.                           | 4 - 6%           | 10%                              | Floating Rate         | BB-B    | $\Diamond \Diamond$          |  |
| High Yield Bonds                | Bond market which can from time to time offer excess returns over comparable loan risk.  | 4 - 6%           | 9%                               | Fixed Rate            | BB-B    | $\Diamond \Diamond \Diamond$ |  |
| Illiquid Corporate Private Debt |  |                  |                                  |                       |         |                              |  |
| Mid-Market Direct<br>Lending    | Bilateral or club loans in the higher yielding mid-market with the ability to take uni-tranche loans if appropriate.   | 6 - 8%           | 7%                               | Floating Rate         | BB-B    | $\Diamond$                   |  |
| Junior Loans                    | Second lien, mezzanine or payment in kind (PIK) tranches of capital structures which can offer a significant uplift versus senior debt even for strong underlying credits. | 7 - 9%           | 12%                              | Floating Rate         | B-CCC   | 0                            |  |
| Opportunistic<br>Debt           | Debt of fundamentally sound companies at attractive yields and liquidity lines for companies facing short term cash squeezes.  | 8 - 12%          | 13%                              | Fixed and<br>Floating | CCC/NR  | <b>\( \)</b>                 |  |

# **M&G** Corporate Credit Opportunities

### Ability to flex allocations to capture value across credit market conditions

### Indicative portfolio characteristics

| Base currency                            | EUR   |  |  |
|--|---|--|--|
| Target returns (gross)                   | E+550-650bps, currently E+800-900bps        |  |  |
| Av. Margin                               | c.600bps                                    |  |  |
| Av. M&G rating                           | B/B-  |  |  |
| No. of issuers                           | 70-100                                      |  |  |
| Basis                                    | Predominantly floating rate                 |  |  |
| Subscriptions/Redemptions/<br>Valuations | Monthly/Quarterly (90 days' notice)/Monthly |  |  |
| Leverage                                 | 0%  |  |  |
| Geography                                | European focus with a global reach          |  |  |
| Structure/Regulatory                     | UCI Part 2 / ELTIF                          |  |  |

Private Credit Markets Converging

M&G's Corporate Credit Opportunities Fund well placed

to capitalise on this trend

# Risks associated with this strategy

The value of investments will fluctuate, which will cause prices to fall as well as rise and investors may not get back the original amount they invested. There is no guarantee the objective will be achieved. Wherever past performance is shown, please note that this is not a guide to future performance.

- Credit Risk: the possibility that a debtor will not meet their repayment obligations.
- Liquidity Risk: where market conditions make it hard to sell the strategy's investments at a fair price to meet redemptions, we may suspend dealing in the strategy's units.
- Prepayment Risk: loans may be prepaid by issuers at short notice, as a result it may be difficult for the strategy to locate and reinvest capital at an attractive price or at all, which may affect the strategy adversely.

Please note this is not an exhaustive list, you should ensure you understand the risk profile of the products or services you plan to purchase.
