I fondi pensione a livello internazionale S|E|B

- La classificazione “altro” identifica le strategie total return e immobiliare
- La diversificazione in strumenti alternativi, in particolare nelle strategie total return, continua a crescere dal 1999
- Nel campione P7, l'esposizione in strumenti alternativi pesa fino al 20% nei portafogli dei fondi pensioni piu' sviluppati

- Il processo di ALM e' diventato piu' evoluto e ora considera sempre di piu' l'investimento total return come una strategia indipendente (pagg 4 - 5)
- In una prima fase la logica total return, o a rendimento assoluto, e' stata erroneamente proposta come soluzione a tutti i problemi (rendimento positivi indipendentemente dalle condizioni di mercato), ha quindi disilluso le aspettative dell'investitore (pag 7)
- La logica total return ha dei vantaggi rispetto alle strategie a benchmark che la portano verso una maggiore ricerca di alfa e decorrelazione (pag 8)
- Simulazioni provano che inserendo in un portafoglio bilanciato una componente total return il profilo rischio/rendimento migliora (pagg 9 - 10)
- Analizzando i 7 paesi con il sistema pensionistico piu' sviluppato si evidenzia che l'unica asset class in costante e continua crescita e' quella che comprende gli investimenti total return (pagg 12 - 13)

Prospective investors should inform themselves as to any applicable legal requirements and taxation and exchange control regulations in the countries of their citizenship, residence or domicile which might be relevant.

Past performance is not indicative of future results, which may vary. The value of investments and the income derived from investments can go down as well as up. Future returns are not guaranteed, and a loss of principal may occur.

Opinions expressed are current opinions as of the date appearing in this material only. References to indices, benchmarks or other measures of relative market performance over a specified period of time are provided for your information only and do not imply that the portfolio will achieve similar results. The index composition may not reflect the manner in which a portfolio is constructed. While an adviser seeks to design a portfolio which reflects appropriate risk and return features, portfolio characteristics may deviate from those of the benchmark.

The portfolio risk management process includes an effort to monitor and manage risk, but does not imply low risk.

The strategy may include the use of derivatives. Derivatives often involve a high degree of financial risk because a relatively small movement in the price of the underlying security or benchmark may result in a disproportionately large movement in the price of the derivative and are not suitable for all investors. No representation regarding the suitability of these instruments and strategies for a particular investor is made.

Holdings may change by the time you receive this report. The securities discussed do not represent all of the portfolio's holdings and may represent only a small percentage of the strategy's portfolio holdings. A complete list of holdings is available upon request. Future portfolio holdings may not be profitable. The information should not be deemed representative of future characteristics for the strategy.
